

BTEC Level 3

As part of your course you will study a wide range of communication technologies, arguably one of the most important is Web Development and Design.

Using only notepad++ I would like (as a minimum) you to develop a 4 page website on a topic of your choice which uses:

CSS to style the page

A CSS Grid or Framework Layout

At least 10 different basic tags

If you are not sure what these are then have a look at:

1. Codecademy HTML
2. W3 schools
